

DAIRY PROGRESS

- **Today dairy farmers in the USA produce 1.6 times more milk with 16 less million cows!**
- **According to a recent Cornell University study, the dairy industry has reduced the carbon footprint of its products by 63% over the past 60 years, due to improvements in animal genetics, nutrition, animal health programs, cow comfort, and overall farm management practices.**
- **In 1944 a cow produced 2 gallons of milk per day. Today a dairy cow produces 8 gallons of milk per day.**
