Overview of State and Regional Food System Plans and Charters

Some people call it a “vision,” while others refer to it as a “charter,” a “plan,” or even a “roadmap.”

Regardless of the term, **18 states & 2 multi-state collaborations** have already developed and **11 states** are in the process of developing participatory plans and charters for their local food system.

Completed in August of 2021, this report offers a snapshot of national trends, and a directory of food systems plans and charters that exist at state and regional levels across the United States (see the directory at the end of this document). It is intended to serve as a resource to facilitate network building and co-learning among practitioners leading these efforts and groups interested in launching their own plans and charters.

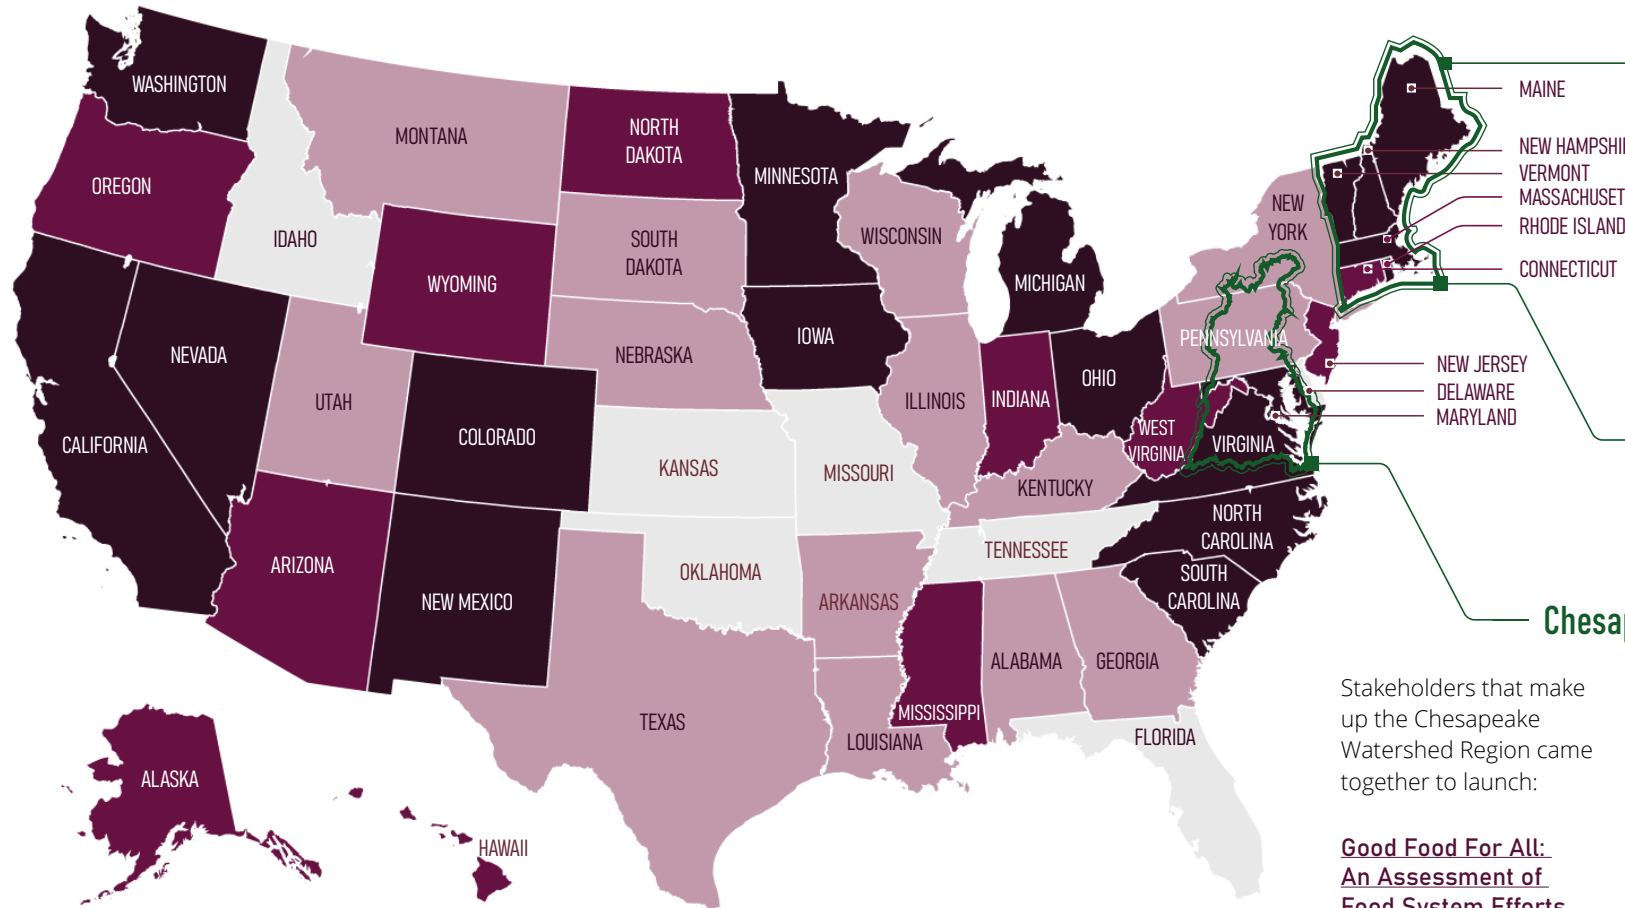

We collected information from plans and charters that are publicly available on websites, and – to the extent possible – followed up with lead organizations or individuals to review information¹ relevant to their state. We looked for plans and charters that:

- a) are systems-based and cross-sector (covering the entire food system),
- b) propose visions beyond 2021 or that are currently being updated (e.g., the 2005 California plan proposed a vision of the food system into 2030), and
- c) were participatory and collaboratively developed (those that crowdsourced ideas and attempted to mobilize stakeholders throughout the state using numerous strategies such as summits, working groups, etc.).

We were unable to determine if all efforts that originally formed to launch plans or charters still exist; in some cases we know such partnerships disbanded, even though stakeholders indicate that the plan or charter still motivates actions today. We did not include the untold number of substate (e.g., city, county) food systems plans, or many statewide strategic plans that focus on single sector issues (e.g., farm to school, etc.). We also could not include the long history of state food system assessments and research² that have been critical for inspiring and informing efforts to eventually develop a collaborative, statewide food system plan or charter.

As shown in the map below, nearly 60 percent of U.S. states have an active food systems plan or one under development. **Eleven of these states are involved in regional food system plans** across the [New England region](#) and [Chesapeake Bay Watershed](#), most of which also have their own statewide plan.

Map of state and regional food system plans and charters

New England Region

Six states jointly launched:

A New England Food Vision

All states in the New England region also have their own statewide plans except for Connecticut, which is in development

Chesapeake Bay Watershed Region

Stakeholders that make up the Chesapeake Watershed Region came together to launch:

Good Food For All: An Assessment of Food System Efforts in the Chesapeake Foodshed

Maryland, Virginia & D.C. also have their own plans

18 states
Active Plan

11 states
In Development

22%

14 states
No Plan

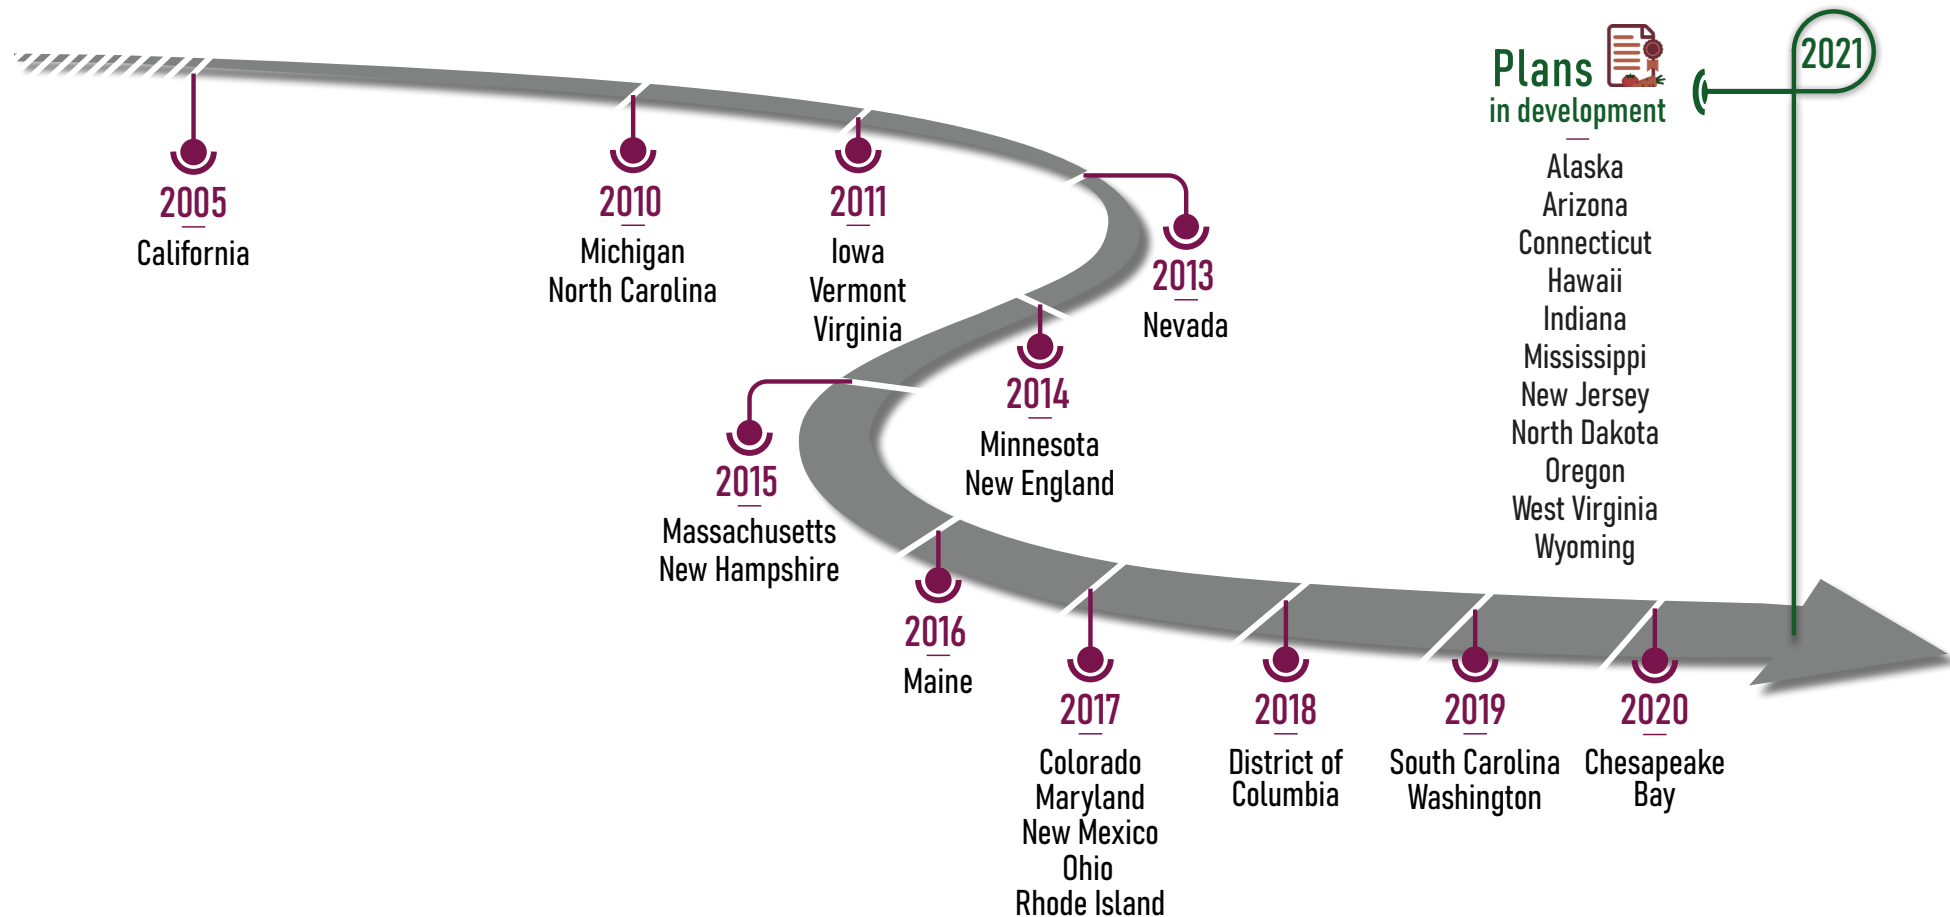

28%

7 states
No Information

14%

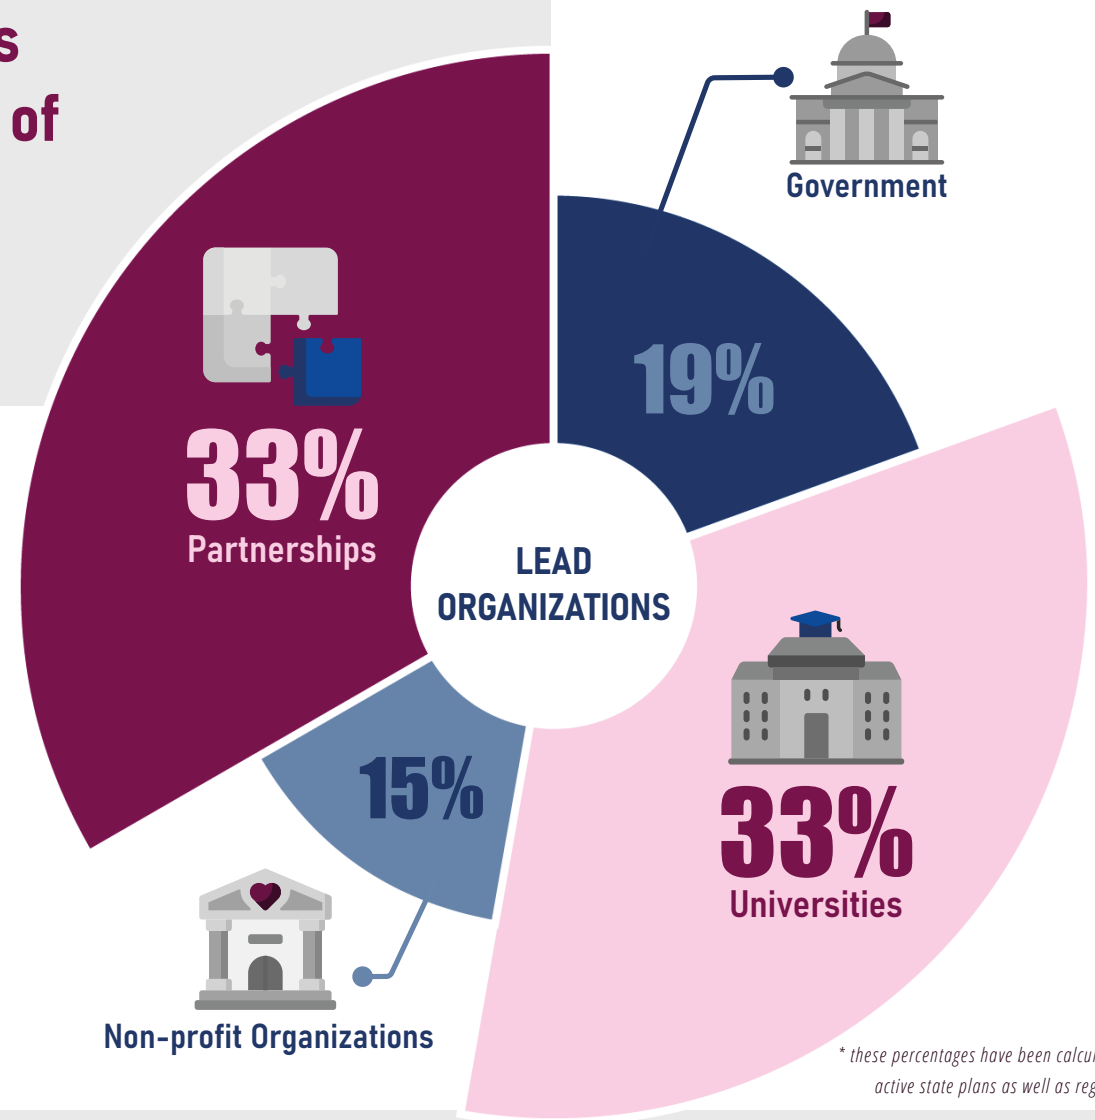

* these percentages have been calculated for the 50 states only and do not include the regional plans.

State and regional food plans and charters in our directory launched as early as 2005 and many are in development

Universities and partnerships are leading the development of most state and regional food system plans and charters

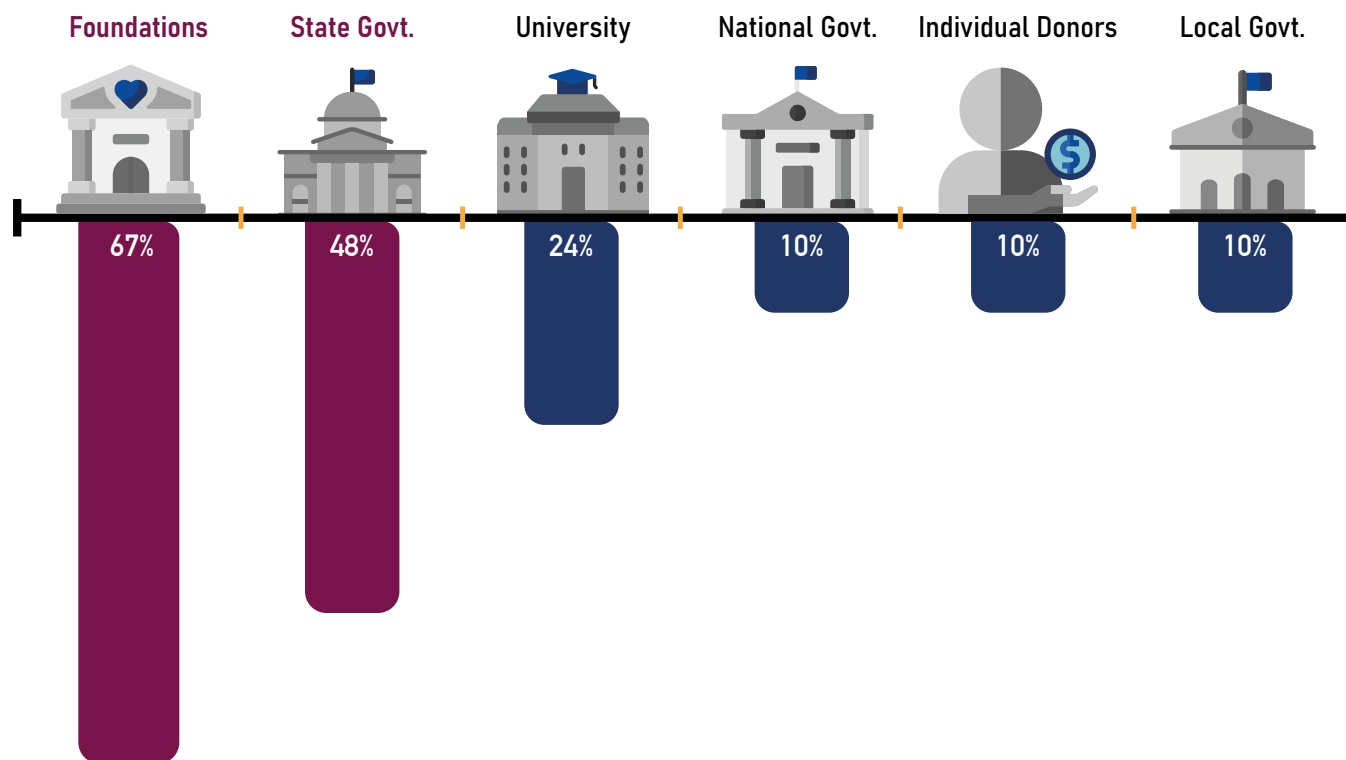

- Organizations leading the development of state and regional food system plans and charters are often referred to as “**backbone organizations.**”
- They have tended to be either a collaboration of many partners, or a university entity.
- State government agencies and nonprofits have also led some of this work.

* these percentages have been calculated for all active state plans as well as regional plans

The majority of state and regional food plans and charters are funded by foundations and state government

State and regional food system plans and charters **draw on multiple sources of funding simultaneously**. Over the last 15 years, foundations have supported more than two-thirds, and state governments half, while universities, national government agencies, individual donors and local governments have also contributed.

** these percentages have been calculated for all active state plans as well as regional plans*

State and regional food system plans and charters are supported by **75 different funders**

Several funders have supported food systems plans and charters in multiple states

Endnotes

¹ We researched food systems plans and charters for the seven US territories, but found no information. We included the District of Columbia, which does not fall neatly into either a recognized state or city. We also began an initial search of food systems plans being carried out by tribal nations, but were not able to sufficiently research these efforts to include them in this directory.

² As one example of the long history of state food systems assessments, see the Cornucopia Project of the 1980s: <http://www.crcworks.org/?submit=rodale>
