Going home: Biosecurity tips for animals that went to the county fair

Adapted from: https://www.canr.msu.edu/news/biosecurity_tips_for_animals_that_went_to_the_county_fair.

[Michigan State University Extension](#) offers these biosecurity steps exhibitors can take to protect their show animals and those that were left at home after the fair has ended.

- Keep animals that were at the fair separate from animals that were not for 28 – 30 days. If at all possible, do not allow nose-to-nose contact and provide as much distance between animals.
- Disinfect all buckets, feeders, tools and footwear that was at the fair.
- Throw away any feed or hay that was at the fair.
- Always wear clean clothes and footwear. Boot coverings may be helpful when caring for animals.
- Take care of animals that stayed home from the show first, and animals that were at the show second. Do not go back and forth between animals as this increases the risk of cross-contamination.
- Do not eat or drink in the barn.
- Observe animals daily for signs and symptoms of illness, such as:
 - Obvious pain or discomfort
 - Decrease in appetite and water intake
 - Fever
 - Lethargy
 - Diarrhea or changes in consistency in manure
 - Discharge from nasal cavity or eyes
 - Overall weakness

Care of animals after the fair is just as critical as their before-fair care. Exhibited animals were exposed to new animal populations and fair goers, and most likely experienced a lot of stress during their time away from the farm. By practicing these biosecurity steps, you can help keep all of your animals safe and healthy.
